Maximum capacity is the maker's rating at the shortest radius. What a crane can lift on your site depends on radius and height, which is why we ask for both.

55 t	60 t	200 t	250 t	317.5 t

Check your load against the ratings

Load weight

t

A maximum rating applies only at the shortest radius. What a crane can really lift depends on the radius and its set-up, so send us the weight and radius and we will check the load chart with you.

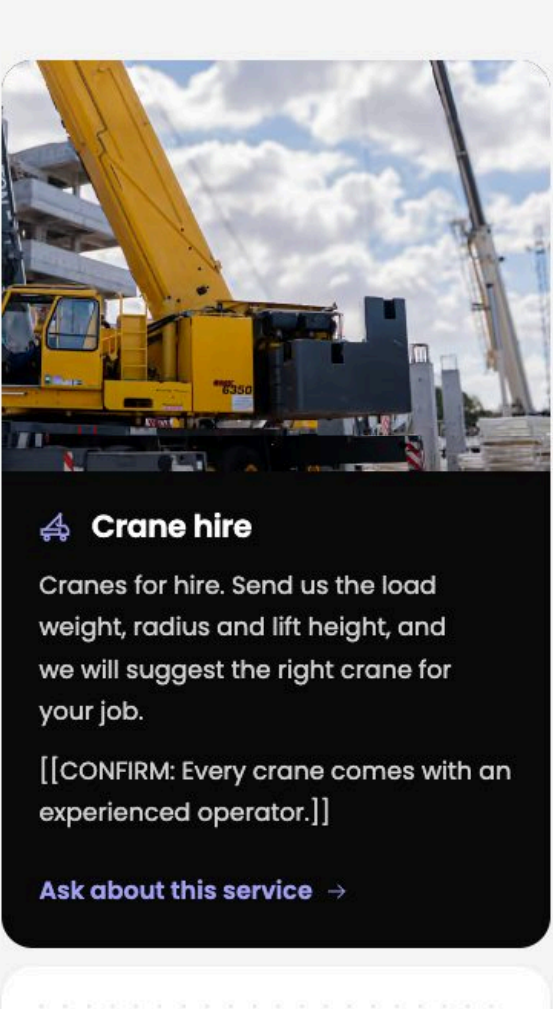
Where the figures come from

— means the manufacturer's document does not state this figure for this model. We leave it blank rather than estimate it.

These are the manufacturer's figures for this model, not figures Atlas Alshraa has confirmed for its own cranes.

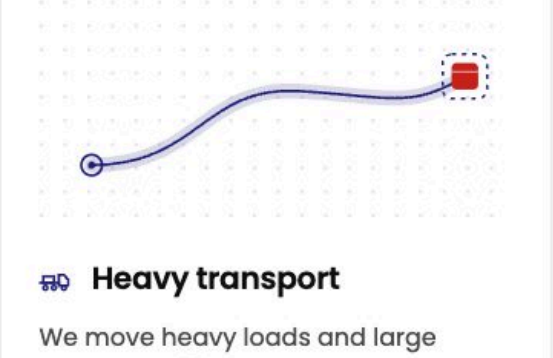


Crane hire

Cranes for hire. Send us the load weight, radius and lift height, and we will suggest the right crane for your job.

[[CONFIRM: Every crane comes with an experienced operator.]]

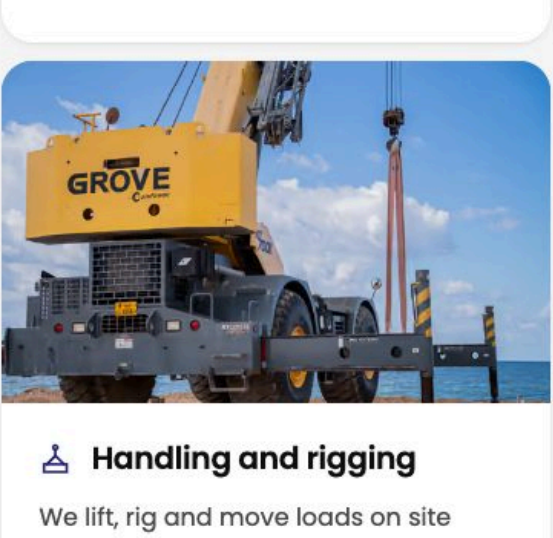
Ask about this service →



Heavy transport

We move heavy loads and large equipment [[CONFIRM: by road, on low-bed trailers]]. Tell us what the load is, what it weighs and where it needs to go, and we will plan the move with you.

Ask about this service →



Handling and rigging

We lift, rig and move loads on site [[CONFIRM: with a rigging crew, slings and lifting gear, and a lift plan]]. Book handling on its own, or with crane hire and transport in one request.

Ask about this service →

Oil services

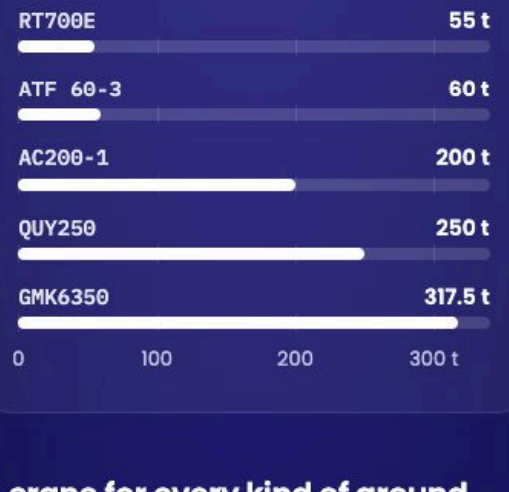
Support for oil and gas work [[CONFIRM: exact scope, for example lifting and transport at oil fields]]. Tell us about the work and where it is, and we will tell you clearly what we can do.

Ask about this service →

55–317.5 t

Maximum capacity of the cranes on this page, smallest to largest, as rated by each maker.

DRAFT · unverified



A crane for every kind of ground

DRAFT · unverified

Rough-terrain crane

Built for uneven ground inside the site.

Grove RT700E

All-terrain crane

Drives on public roads and works on site.

Tadano Faun ATF 60-3
Terex AC200-1
Grove GMK6350

Crawler crane

Moves on tracks that spread its weight, for heavy lifts.

Fuwa QUY250

Hiring a crane, step by step

1. **Tell us the load and the site**
   The load weight, the lift radius and height, and where the work is.
2. **We match the right crane**
   We check your lift against the crane maker's load chart.
3. **We confirm availability and dates**
   We tell you which crane is free, and when it can reach you.
4. **The crane arrives on site**
   It is set up where we agreed, and the lift begins. [[CONFIRM: An experienced operator comes with it.]]

Ask the way that suits you

Pick a crane from the crane list and its name is already filled in, in your message and in the request form.
